

Overview: Print a string.

Description: Loki, our favorite resident trickster Nordic god, has a slight problem. He has come to Midgard with glad tidings of a world made free, but nobody seems to want to listen to him! All he has for company is an archer who can't shoot as well as Katniss or Legolas, and an old professor who's always going on about gamma rays and electrons, whatever they are. Pfft.

To be honest, Loki is starting to feel a tad misunderstood. Freedom is a lie, but only he seems to be able to grasp that concept. Also, he has an army - what more could these pathetic, ant-like people want from him? Humans were made to be ruled, and everyone who's anybody knows *that*. Any more disrespect from mankind, Loki swears, and he'll have to off the entire race slowly, intimately, in every way he knows they fear.

But before that happens, he has a backup plan, and that plan involves *you*. Loki has kidnapped you, and needs you to broadcast a very important message to the human race. You see, Loki would love to do this himself, but programming wasn't really a career option back in the day at the University of Asgard. Will you help? Oh wait, you don't have a choice - he'll stab your eyes out if you don't! What a nice guy.

Good luck!

Filename: nov21.{java, cpp, c, cc, py}

Input/Output: There is no input for this problem.

Print the following string exactly as shown, on two lines, including the quotes:

```
"I am Loki, of Asgard.  
And I am burdened with glorious purpose."
```

Assumptions: There are no assumptions.

Sample Input There is no input for this problem.

Sample Output "I am Loki, of Asgard.
And I am burdened with glorious purpose."
